

Signal of the week

NHTSA opens 'Recalls Next' docket on OTA updates and automated vehicles

NHTSA published Federal Register notice 2026-19712 on 28 September opening docket NHTSA-2026-2014 and scheduling a 5 November meeting on how OTA updates, connected vehicles and automated vehicles affect recall completion. Public comments run until 5 December 2026.

Why it matters — First formal US rulemaking inquiry treating OTA and AV lifecycle as a recall-completion problem.

The read-across

Regulators dominated the week. NHTSA opened a formal docket on OTA updates and automated vehicles complicating recall completion, UNECE's driverless ADS framework moved towards EU transposition, and EU Cyber Resilience Act reporting duties went live for aftermarket and off-highway equipment. Cyber themes are prominent where R155, CRA, and ISO/SAE 21434 overlap across automotive, fleets, and agriculture.

Kigen became the first automotive eSIM certified against GSMA eSA for SGP.32 v1.3, Humax shipped a 22 kW fleet charger with embedded eSIM, and Applied Intuition extended its autonomy stack to Komatsu haul trucks. Software-defined recalls at Hyundai, JLR, Rivian, and Mitsubishi, alongside the Agility-FORT humanoid safety MOU, show safety architecture becoming a common language across vehicles, robots, and machines.

NHTSA report confirms UNECE driverless ADS GTR adoption, UK and EU prepare transposition

NHTSA's September 2026 Report to Congress confirmed WP.29 adopted the first global driverless ADS regulation and GTR in June. The EU Commission's delegated regulation under the General Safety Regulation is expected in Q4 2026, with UK liability principles reaffirmed.

So what — First binding international framework for Level 3–5 ADS moves toward domestic enforcement in major markets.

Jaguar Land Rover expands DC-DC converter software recall in the US

NHTSA recall 26V600000, filed 18 September 2026, expands JLR's prior 26V248 campaign covering DC-DC converter failure that can cause complete loss of drive power. Dealers will update vehicle software free of charge, with interim owner letters due 13 November 2026.

So what — Second expansion in six months shows software remediation of a safety-critical power defect across the JLR fleet.

Toray and T2 start commercial autonomous-truck freight on Japanese highways

Toray Industries and autonomous-trucking company T2 began commercial operations carrying petrochemical freight on Japanese expressways, announced via PR Times on 3 October. The deployment is among the first revenue-generating Level-4-adjacent autonomous freight missions in Japan.

So what — First paid autonomous freight route for a major Japanese industrial shipper, advancing driver-shortage mitigation.

Agility Robotics and FORT Robotics sign MOU on Digit 5 humanoid safety architecture

On 1 October, Agility Robotics and FORT Robotics signed an MOU embedding a three-part safety architecture — safety pendant, on-robot communications, and an Offboard Safety Bridge — into Digit 5, expanding FORT's role into joint hardware development and regulatory compliance.

So what — Sets a reference safety stack for scaled humanoid deployment in warehouses and manufacturing.

ANYbotics launches Shift fleet platform for ANYmal quadrupeds

On 1 October ANYbotics launched Shift, a fleet-operations platform integrating plant mapping, robot coordination, inspection AI and third-party systems for ANYmal quadrupeds. Shift AI converts field findings directly into maintenance work orders for oil-and-gas and industrial inspection customers.

So what — Robotics OEMs are now selling telematics-style fleet management, mirroring vehicle TSP offerings.

Kigen automotive eSIM is first certified to GSMA eSA for SGP.32 v1.3

Arm Kigen achieved GSMA eUICC Security Assurance certification for its automotive eSIM supporting SGP.32 v1.3, including direct and indirect profile downloads and emergency profile handling. Hybrid post-quantum cryptography is included and ETSI MFF2 sampling begins October 2026.

So what — Sets the first security benchmark for the IoT eSIM standard likely to replace SGP.22 in long-life vehicles.

Regulatory Data mgmt

EU Data Act design obligations for connected vehicles apply from 12 September

From 12 September 2026, EU Data Act design obligations require connected products including fleet vehicles to enable user-directed data access. Fleet owners can nominate third-party data recipients without going through the manufacturer, covering raw and pre-processed sensor and usage data.

So what — Shifts control of in-vehicle data from OEMs to fleet operators across the EU single market.

OCTO Telematics and TruckerCloud partner on US commercial auto insurance telematics

On 28 September OCTO and TruckerCloud announced a partnership combining OCTO's DriveAbility risk scoring and crash-detection hardware for Class 1–6 vehicles with TruckerCloud's normalisation platform spanning around 200 ELD, camera and telematics systems. The joint offer targets US commercial insurers.

So what — Consolidates fragmented commercial-fleet telematics data into a single insurer-grade feed.

Humax launches 22 kW fleet EV charger with built-in 4G eSIM

Humax EV Charging unveiled the MX PRO 22 kW fleet charger at Fleet & Mobility Live on 6–7 October. It includes a built-in 4G eSIM allowing network changes without SIM swaps, supports OCPP 1.6J, and is field-upgradeable to OCPP 2.0.1.

So what — Embeds orchestrated connectivity into charge-point hardware, following the vehicle eSIM model.

Regulatory Connectivity

California signs VPP and balcony solar bills, vetoes community solar

Governor Gavin Newsom signed bills supporting virtual power plants and balcony solar whilst vetoing a community solar bill, processing around 1,200 energy measures. The VPP legislation aims to accelerate aggregation of distributed storage and EV charging as controllable grid resources.

So what — Clarifies US legal basis for aggregating EVs and home storage into dispatchable grid assets.

Applied Intuition partners with Komatsu on next-generation autonomous mining haulage

Applied Intuition confirmed a partnership with Komatsu to co-develop the next-generation autonomous haulage system, bringing its vehicle-intelligence software to Komatsu's mining fleet. The collaboration extends Applied Intuition's automotive SDV autonomy stack into off-highway equipment.

So what — Automotive autonomy vendors are moving into mining, blurring on- and off-highway software stacks.

Applied Intuition blog, 2026-09-01

Regulatory Cybersecurity

EU Cyber Resilience Act Article 14 reporting duties go live for off-highway machinery

From 11 September 2026, CRA Article 14 requires manufacturers of connected products — including agricultural vehicles, non-road mobile machinery, and retrofit telematics — to report actively exploited vulnerabilities to ENISA and national CSIRTs within 24 hours.

So what — Creates a parallel cybersecurity regime for off-highway OEMs outside UN R155.
