Signal of the week

Toyota and Waymo to test autonomous bZ4X fleet in Japan from 2027

Toyota and Waymo will begin testing a Level 4 autonomous bZ4X fleet in Japan in 2027, with Waymo hardware integrated at Toyota's Takaoka plant.

Why it matters — Commits a named OEM customer and a leading robotaxi operator to a Japanese and later UK fleet launch.

Sources: Waymo Newsroom (2026-11-03)

The read-across

Regulation set the pace this week. The EU AI Act's Article 50 transparency duties went live, ISO/SAE 21434 entered formal revision, UNECE WP.29 queued ADS and R155/R156 amendments for its 200th session, and the UK opened a consultation on charge-point cybersecurity. Software recalls at Hyundai and GM reinforced the shift from mechanical to software-mediated safety remedies.

AI and SDV activity concentrated around Level 4 pilots and data governance. Toyota and Waymo set a 2027 bZ4X test in Japan with a later UK phase; Nvidia and Kakao Mobility signed a Level 4 agreement in Seoul.

Japan completes R155 cybersecurity phase-in for all new vehicles

From November 2026 every newly sold vehicle in Japan, including non-OTA continuing-production models, must comply with UNECE R155 cybersecurity management requirements. Japan transposed the rule in December 2021 and phased it in from OTA-capable models in July 2022.

So what — Closes the last gap in R155 coverage across a major UNECE market, affecting every Japanese OEM line.

Stellantis, Wayve, Nvidia and French government plan L4 deployment in Paris

Stellantis will combine its STLA AutoDrive platform with Wayve's AI Driver and Nvidia's Halos OS on Hyperion compute for a Level 4 programme across Métropole du Grand Paris, covering 129 municipalities. Deployment is scheduled to begin in 2028.

So what — Binds a European OEM, a UK autonomy vendor and a US compute platform to a public L4 rollout in France.

Hyundai recalls 37,901 vehicles for ZF airbag control unit software defect

Hyundai filed NHTSA recall 26V728 on 2 November 2026 for a ZF-supplied airbag control unit software flaw causing data corruption that could prevent airbag deployment.

So what — Software data-integrity flaw in a safety-critical ECU adds to the rising count of software-driven recalls at a named account.

Nvidia and Kakao Mobility sign L4 autonomous-driving MOU at Seoul AI Day

At Nvidia AI Day Seoul on 9 November, Nvidia and Kakao Mobility agreed to co-develop a Level 4 system using Hyperion sensors, Halos validation and Kakao software on a Kia PBV.

So what — Draws Korea's ride-hailing leader and a named automotive group into a single Nvidia-centred L4 stack.

China blocks SoftBank's $5.4bn acquisition of ABB robotics business

Chinese regulators rejected SoftBank's roughly $5.4bn acquisition of ABB's robotics unit, citing risks that factory-floor robot data could flow abroad and train AI models at OpenAI, in which SoftBank is a major shareholder.

So what — Treats industrial robot data as a national-security asset and constrains SoftBank's physical-AI consolidation strategy.

TIER IV leads Autoware 2.0 with Arm, AWS and Red Hat for AI-defined vehicles

TIER IV announced on 2 November 2026 it is leading Autoware 2.0, adding end-to-end AI and hybrid driving stacks to the open-source platform.

So what — Realigns the main open-source autonomy stack around end-to-end AI with named cloud and OS partners.

GM recalls 67,380 Cadillac and Chevy EVs over brake software defect

GM recalled 67,380 Cadillac Celestiq, Vistiq and Chevrolet EV models after a slip-calculation software bug caused temporary loss of braking at low speeds during sharp turns over bumps.

So what — OTA-remediated brake-software recall at a named account illustrates the direction NHTSA's recall framework is moving.

eSync Alliance warns workshop-only cyber fixes leave safety-critical ECUs exposed

The eSync Alliance warned that many safety-critical controllers covering braking, steering and driver assistance cannot receive remote OTA security patches and must be fixed via workshop recall, leaving fleets exposed until owners book service.

So what — Reframes OTA coverage as a cybersecurity exposure metric, not just a feature-delivery capability.

UK consults on cybersecurity standard for public EV charge points

The UK Department for Transport opened a consultation on a minimum cybersecurity standard for all newly sold or installed public EV chargers in Britain, citing threats including direct attacks and manipulation of charging networks.

So what — First UK move to formalise charge-point cyber requirements, with CPOs and EMSPs flagged as next scope.

Mercedes-Benz exits European charging, sells 47 hubs to Electra

From 1 November 2026 Mercedes-Benz transferred all 47 of its European High Power Charging hubs, comprising 374 charge points, to French operator Electra following a July 2026 board decision.

So what — A named OEM withdraws from running its own charging estate while keeping the in-car service layer.

Watch list

NHTSA 'Recalls Next' meeting focuses on OTA remedies and ADS defects. Signals how the US regulator intends to update recall frameworks for software-defined and automated vehicles.

EU AI Act Article 50 transparency duties enter force for robots and AVs. Adds a further EU compliance layer for robotics and AV makers alongside CRA and type-approval duties.

Targa Telematics ties OEM data into Jurni Leasing's UK fleet of 31,000. Shows a leasing fleet shifting from aftermarket devices to embedded OEM data as its telematics source.

UNECE WP.29 200th session queues ADS and Euro 7 amendments. Next step in turning June's driverless-ADS framework into detailed amendments for UNECE contracting parties.

> **ISO/SAE 21434 enters formal revision after October 2026 systematic review.** Begins a multi-year rewrite of the core automotive cybersecurity engineering standard behind R155.
